PREPWORKS to Present at iNACOL Blended and Online Learning Symposium

PREPWORKS to Lead Session on latest findings on Standards Alignment in Multi-Dimensional, Adaptive, Individualized Courses

MIAMI--(BUSINESS WIRE)--June 19, 2013--

PREPWORKS, the award-winning adaptive test prep company, has been selected to present at the annual conference of the International Association for K-12 Online Learning (iNACOL) to be held in Orlando, Florida October 27 -- 30, 2013.

The iNACOL Symposium is the premier conference for those shaping the future of K-12 online and blended learning and will host more than 2,000 education leaders from around the world.

The two major changes in K12 education taking place this decade are the introduction of national standards and the improvement of adaptive education technology. No longer a mediocre addition to the classroom, the right technology can now deliver fully adaptive courses, teaching exactly what individual students need to learn. In the PREPWORKS led session, titled "Standards Alignment in Multi-Dimensional, Adaptive, Individualized Courses" symposium participants will learn about ways to use multi-dimensional, personalized learning paths on a large scale to ensure both improved student performance levels and alignment to the Common Core State Standards.

"The best adaptive course engines offer individualized courses, resulting in dramatic gains in student learning as students are given the right content at the right level at the right time," said Tracy LaFlamme Ortega, PREPWORKS founder and CEO. "However, as different students in a truly adaptive course will often see different content depending on their individual needs, this can present challenges for educators as they work to ensure complete coverage of Common Core."

Already in place at Pinellas County Schools, Florida Virtual School, and many other schools throughout North America, the gaming-changing results are being noticed as the solution to the challenge of ensuring standards alignment and student progress.

"We are confident that our session will help professionals gain insight into how to implement standards aligned adaptive courses in their schools and districts and how to reap the benefits of improved student learning, improved engagement, and improved test scores. said Michael Penney, PREPWORKS CTO.

About PREPWORKS: Founded in 2005, PREPWORKS, the winner of the 2013 BESSIES Award, (Best Educational Software) is an educational technology company, offering a combination of innovative software, courseware, and reporting capabilities designed to promote student achievement in secondary school and high-stakes standardized assessments. The company serves students from across the country and the globe, working at district and state levels, as well as with many independent schools and non-profit organizations.
